

When, where, and which wildlife species are most involved in aircraft strikes, and what impact do these strikes have on aviation?

WHEN?

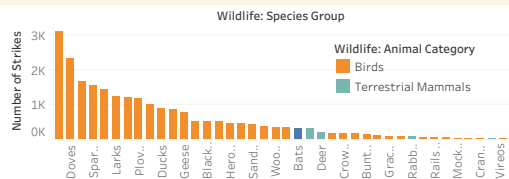

Number Of Collisions By time of day from 2000 to 2014

Overall, the data shows that wildlife strikes have increased over time, with birds being the most frequently involved wildlife. Strikes are concentrated in certain U.S. states and airports, while the financial impact varies considerably between locations. The findings highlight that although bird strikes are common, their impact on aviation can be substantial, particularly at airports experiencing higher-cost and more severe damage events.
